```
# Flatten the 2D array into a 1D array
print(new_array.ravel())

# Reshape the array into a 3x3 matrix
newm = new_array.reshape(3, 3)
print(newm)

# Select the third row, columns 1 and 2
print(newm[2, 1:3])

# Select the second row, columns 1 and 2
print(newm[1:2, 1:3])

# Select all rows but no columns
print(new_array[0:3, 0:0])

# Select the first column of the first two rows
print(new_array[0:2, 0:1])

# Select the first column of all three rows
print(new_array[0:3, 0:1])
```
